

EJ and Air Workshop, September 6-7, 2007  
Project Information and Summary

**Hilton Kelley**  
**Communities In-Power and Development Association**

1. Please provide a brief Description of your project/activity.

Our project is refinery reform and Environmental Justice

2. Why is it important for communities to know about this project/activity?

This project is important to others because we are all impacted by the tons of pollution that is dumped into our atmosphere every day and if one would look around their own community they would probably find a facility that pollutes.

3. What have been the successes and challenges associated with this project/activity?

By identifying that there is a pollution problem in our community we have encouraged industry to look at new ways that they can do business and reduce emissions. Some of our challenges is to get city officials and the EPA to give us a hand in this fight.

4. Where can communities go for more information about this project/activity? (web and/or contact information)
